Subject: RE: Commercial Waste Treatment and Disposal Facilities

Gary I have gathered some lists, here is a spread sheet of all the MSW facilities in Texas and their capabilities. Additionally there are two CINWLS permitted under Subtitle C, one is Permit # 39039 Gulf West Landfill (Chambers County) and the other is Permit # 39001 Conroe Industrial (Montgomery County). There are two hazardous waste landfills, USET in Robstown, TX and WCS in Andrews County. Wastewater disposal there is the Gulf Coast Waste Authority, you may need to go through someone permitted by them such as Texas Molecular who I believe also operates a commercial waste injection well. There are multiple used oil handlers in the Houston area, I know Safety Kleen operates down there as well as Thermo Fluids, and Intergulf. Clean Harbors operates a commercial incinerator in La Porte. I believe a company named Heat operates fuels blending out of Houston. Not sure about thermal desorption, I think USET operates one but I'd bet there is one in the Houston area.

I am attaching some lists that are on my hard drive for your use, if you get a particular waste stream you cannot find a home for give me a call and I'll dig through and find someone who can take it.

Thank you,
Keith Witter

Subject: Commercial Waste Treatment and Disposal Facilities

Hello:

I got your name from Nicole Bealle from the TCEQ Houston Office. TCEQ and EPA are working on the CES Environmental Services Site in Houston and will need to dispose of

wastes left behind after the facility closed operations. The types of waste may include: Liquids, Sludges, Contaminated Stormwater that may be hazardous or non-hazardous wastes. We are in the process of doing analytical to make that determination.

I need to find out a list of available disposal facilities in the Houston Area primarily but could be expanded to the east to Port Arthur/Beaumont and to the west to Corpus Christi and to the north to Dallas.

I was thinking:

1. Industrial Wastewater Treatment
2. Fuel Blending
3. Incineration
4. Thermal Desorption
5. Neutralization
6. Used Oil Recycling
7. Empty Container Cleaning and Disposal

If you have a complete list of Commercial Waste Treatment and Disposal Facilities in the State of Texas, that would be wonderful.

Anything you can do to help will help me start narrowing down potential Treatment and Disposal Facilities in the area that we can have bid on the wastes that we may have.

Thanks for your prompt attention to this request,

Gary Moore
